

Human-Computer Interaction

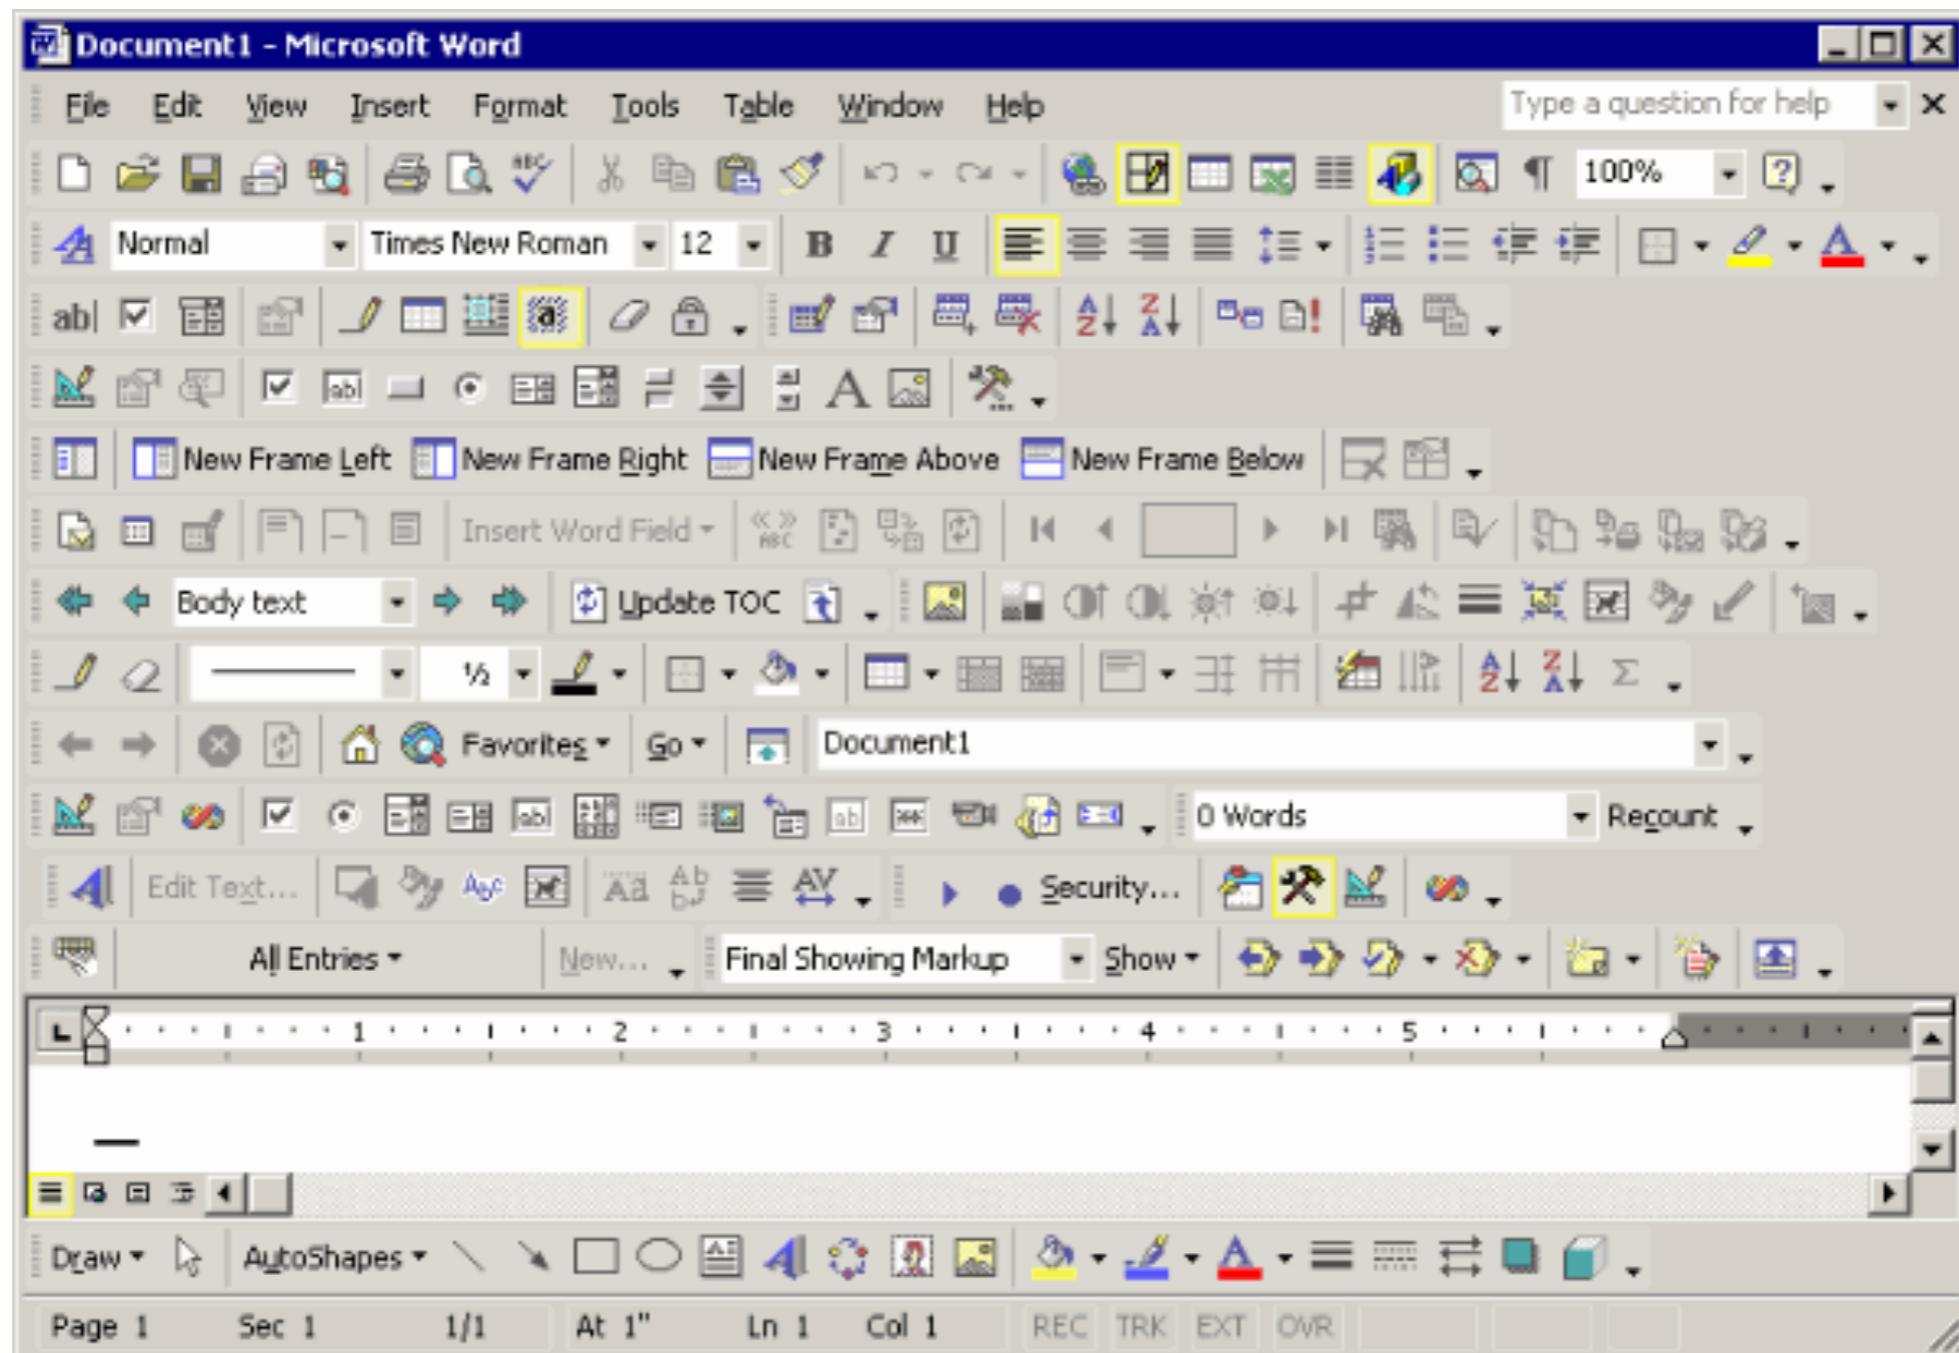

CPSC 481 - Spring 2019

Good Interfaces

What makes a good experience?

What makes a good experience?

What is User eXperience (UX)?

What is User eXperience (UX)?

User eXperience (UX)

“How people feel when they use something.”

–Tomer Sharon

Characteristics of a good interface

Characteristics of a good interface

- People feel **satisfied** when they use them

Characteristics of a good interface

- People feel **satisfied** when they use them
- People can complete their tasks **error-free**

Characteristics of a good interface

- People feel **satisfied** when they use them
- People can complete their tasks **error-free**
- People can complete their tasks **quickly**

Characteristics of a good interface

- People feel **satisfied** when they use them
- People can complete their tasks **error-free**
- People can complete their tasks **quickly**
- People can **learn** how to use the system (and its full functionality) **quickly**

What is design?

What is design?

- Process of creating or shaping tools or artifacts for direct human use.

What is design?

-
- Processes, methods
- Process of creating of shaping tools or artifacts for direct human use.

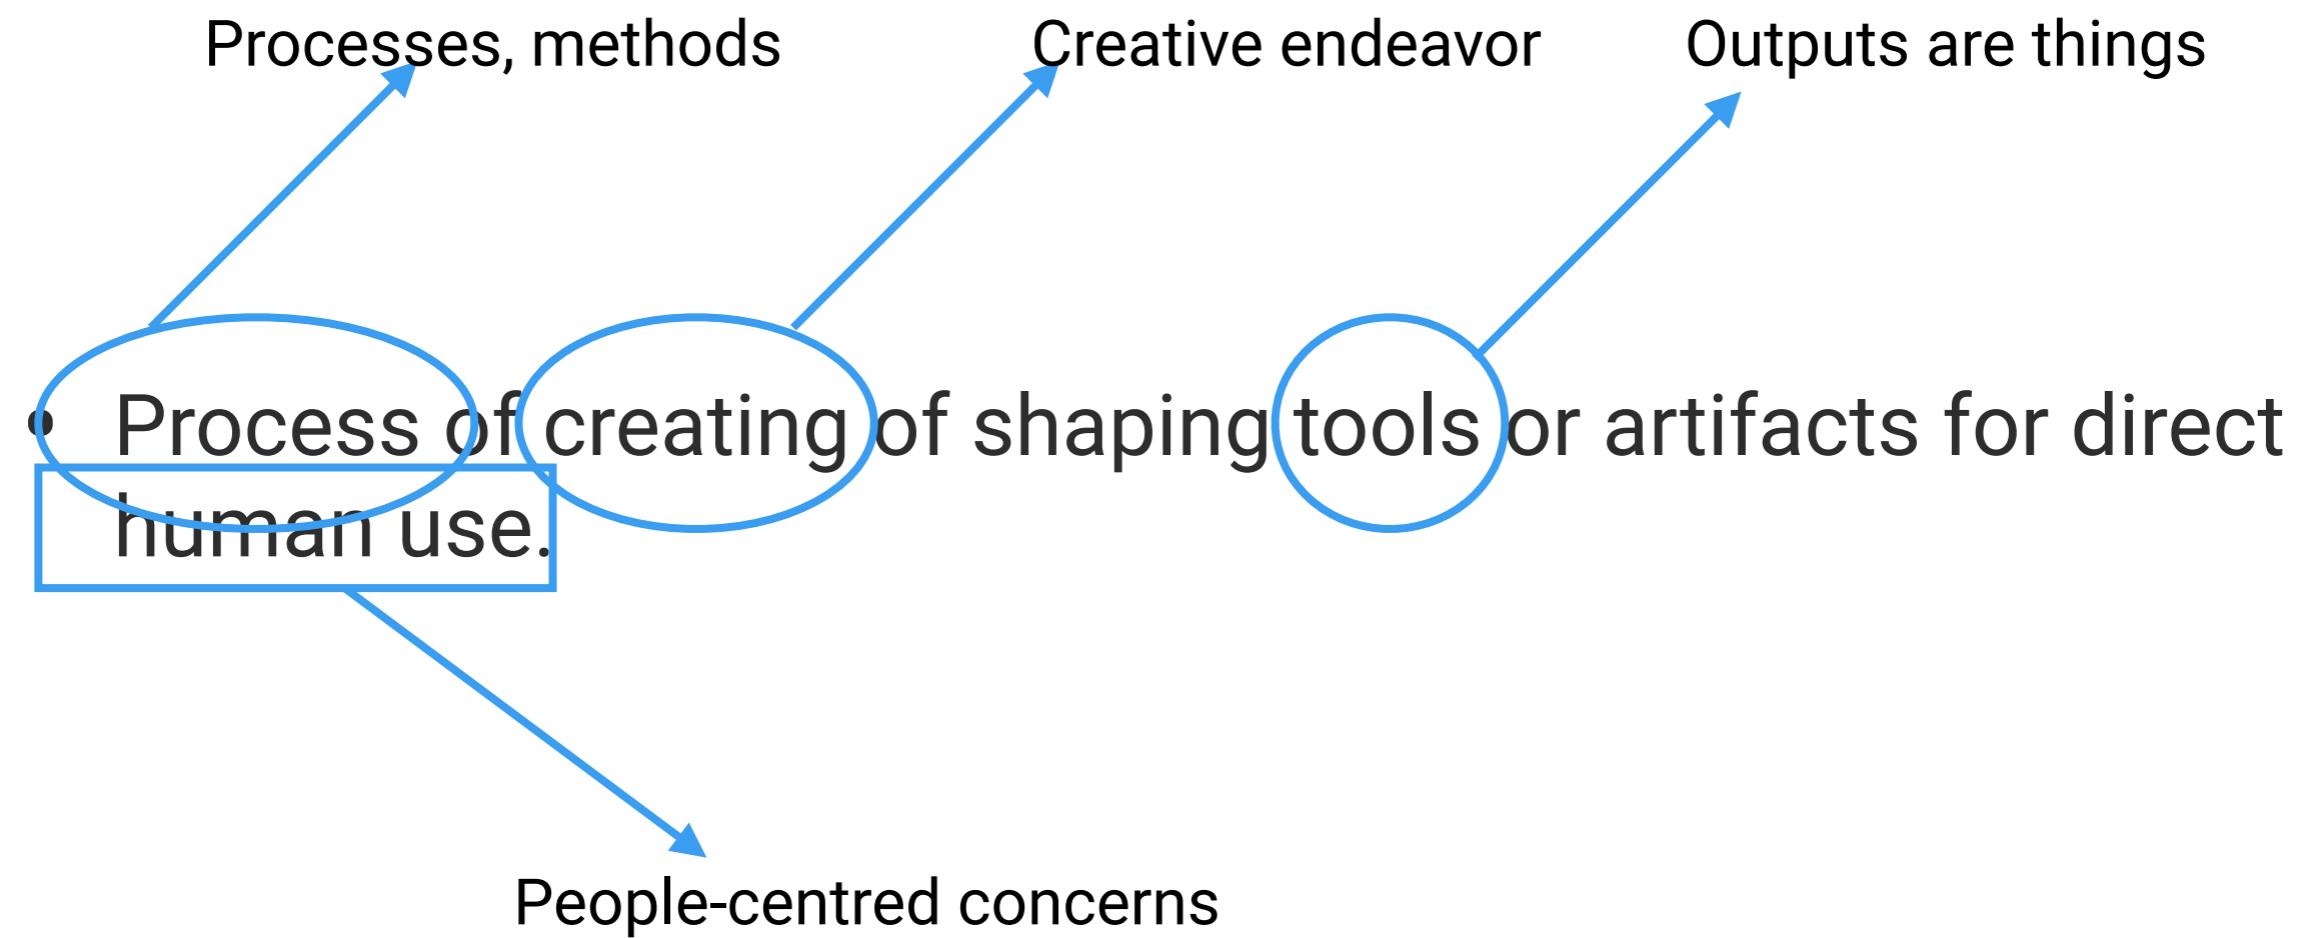

What is design?

- Process of creating of shaping tools or artifacts for direct human use.
 - Processes, methods
 - Creative endeavor

What is design?

- Process of creating of shaping tools or artifacts for direct human use.
 - Processes, methods
 - Creative endeavor
 - Outputs are things

What is design?

Design vs. Engineering

Design vs. Engineering

- Engineering
 - Make a mostly-known outcome possible
 - Construct a bridge based on specifications
 - Concerned with what can be done
 - Reliance on well-established formulae
 - Humans may or may not be directly “in the loop”
- Design
 - Envision new possibilities, new outcomes
 - Determine what outcome should result among infinite possibilities
 - Reliance on process over formulae
 - Humans are central actors “in the loop”
 - Context (cultural and temporal) matters

Design vs. Art

- Design
 - (as we regard it) concerns the creation of something **useful and usable**
- Art
 - does not bother with this restriction
 - The test: how to deem what is “good”?

Design vs. Art

- Design
 - (as we regard it) concerns the creation of something **useful** and **usable**
 - **Useful:** something that has a purpose that can solve a problem that I have
 - **Usable:** meaningfully easy for me to use it
- Art
 - does not bother with this restriction

Why should we care?

Why should we care?

- Shift of attention in computer science:
 - Algorithms -> People

What is designed?

What is designed?

- Anything consciously intended for human use is designed.

What is designed?

- Anything consciously intended for human use is designed.

Characteristics of a good interface

- People feel **satisfied** when they use them
- People can complete their tasks **error-free**
- People can complete their tasks **quickly**
- People can **learn** how to use the system (and its full functionality) **quickly**

Why is design hard?

Why is design hard?

- Everyone is different
 - *Age, knowledge, skill, ability, background*

Why is design hard?

- Everyone is different
 - *Age, knowledge, skill, ability, background*
- People appropriate technology unexpectedly
 - *Designer's fallacy: that a designer can design into a technology, its purposes and uses*

Why is design hard?

- Everyone is different
 - *Age, knowledge, skill, ability, background*
- People appropriate technology unexpectedly
 - *Designer's fallacy: that a designer can design into a technology, its purposes and uses*
 - Contexts of use may differ than what we expect
 - *Smartphone app use in the early days, and now*

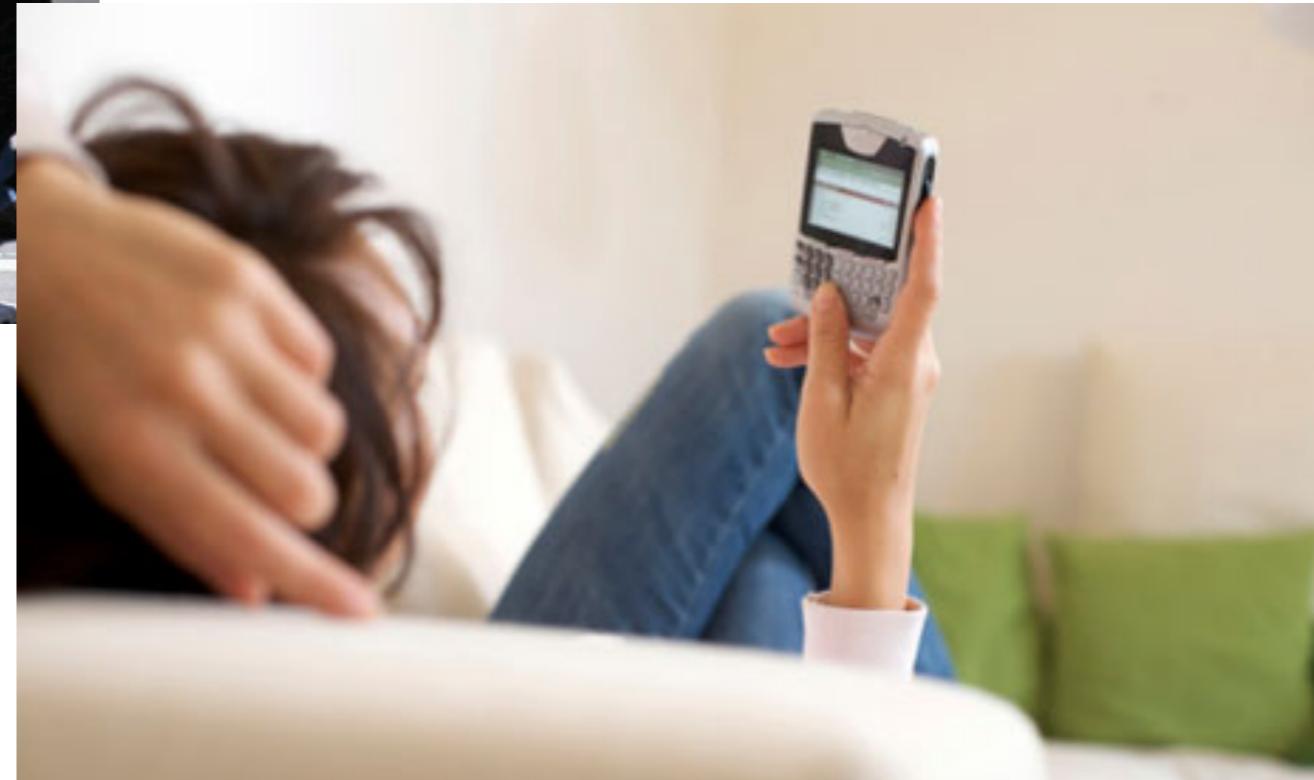

Appropriation

Appropriation

Appropriation

Why is design hard?

- Judging/predicting which designs will be successful is difficult
 - Way more is possible than what is good
- Design involves making trade-offs
- Good designs are non-obvious

People make errors

People make errors: two kinds

- Slips
- Mistakes

People make errors: two kinds

- Slips
 - error in carrying out an action (e.g. motor action)
- Mistakes
 - error in choosing an objective or action (e.g. cognitive goal)

People make errors: two kinds

- Slips
 - error in carrying out an action (e.g. motor action)
- Mistakes
 - error in choosing an objective or action (e.g. cognitive goal)
- Key:
 - mistakes typically occur when a person misunderstands something in the system;
 - a slip you could imagine to be a lapse in attention, or due to a change in typical circumstance

Slip vs. Mistake

Slip vs. Mistake

- Imagine you are using a mapping application wanted to find something, and clicked this icon.

Slip vs. Mistake

- Imagine you are using a mapping application wanted to find something, and clicked this icon.
- Let's pretend that in the application, the icon meant to magnify.

Slip vs. Mistake

- Imagine you are using a mapping application wanted to find something, and clicked this icon.
- Let's pretend that in the application, the icon meant to magnify rather than to search.
- Is this a slip or a mistake?

Slip or mistake?

- Mistyping an email address

Slip or mistake?

- Mistyping an email address (**slip**)

Slip or mistake?

- Mistyping an email address (**slip**)
- Clicking on a heading that isn't clickable

Slip or mistake?

- Mistyping an email address (**slip**)
- Clicking on a heading that isn't clickable (**mistake**)

Slip or mistake?

- Mistyping an email address (**slip**)
- Clicking on a heading that isn't clickable (**mistake**)
- Clicking “Save” instead of “Open”

Slip or mistake?

- Mistyping an email address (**slip**)
- Clicking on a heading that isn't clickable (**mistake**)
- Clicking “Save” instead of “Open” (**slip**)

Slip or mistake?

- Mistyping an email address (**slip**)
- Clicking on a heading that isn't clickable (**mistake**)
- Clicking “Save” instead of “Open” (**slip**)
- Sending an email without remembering to add the attachment

Slip or mistake?

- Mistyping an email address (**slip**)
- Clicking on a heading that isn't clickable (**mistake**)
- Clicking “Save” instead of “Open” (**slip**)
- Sending an email without remembering to add the attachment (**slip**)

Slip vs. Mistake

- Good designers help users avoid mistakes. With careful design, we can avoid slips too.

Core design skills

- To synthesize a solution from all of the relevant constraints, understanding everything that will make a difference to the result

Core design skills

- To synthesize a solution from all of the relevant constraints, understanding everything that will make a difference to the result
- To frame, or reframe, the problem and objective

Core design skills

- To synthesize a solution from all of the relevant constraints, understanding everything that will make a difference to the result.
- To frame, or reframe, the problem and objective
- To create and envision alternatives.

Core design skills

- To synthesize a solution from all of the relevant constraints, understanding everything that will make a difference to the result.
- To frame, or reframe, the problem and objective.
- To create and envision alternatives.
- To select from those alternatives, knowing intuitively how to choose the best approach.

Core design skills

- To synthesize a solution from all of the relevant constraints, understanding everything that will make a difference to the result.
- To frame, or reframe, the problem and objective.
- To create and envision alternatives.
- To select from those alternatives, knowing intuitively how to choose the best approach.
- To visualize and prototype the intended solution.

“The user is not like me”

“The user is not like me”

- Familiarity with the interface problems being solved

“The user is not like me”

- Familiarity with the interface problems being solved
- Confidence

“The user is not like me”

- Familiarity with the interface problems being solved
- Confidence
- Designer’s setting vs. user’s setting

“The user is not like me”

- Familiarity with the interface problems being solved
- Confidence
- Designer's setting vs. user's setting
- Designers have different skills (perceptual, cognitive, or domain)

User-Centered Design (UCD)

User-Centered Design (UCD)

- An iterative design process that makes use of knowledge through investigation of a domain of work/play to create ideas and prototypes.

User-Centered Design (UCD)

- An iterative design process that makes use of knowledge through investigation of a domain of work/play to create ideas and prototypes.
- Prototypes are used for evaluation, and to further stimulate investigation, and idea and prototype generation.

User-Centered Design (UCD)

- An iterative design process that makes use of knowledge through investigation of a domain of work/play to create ideas and prototypes.
- Prototypes are used for evaluation, and to further stimulate investigation, and idea and prototype generation.
- These prototypes and evaluations are used to aid in production.

User-Centered Design (UCD)

- An iterative design **process** that makes use of knowledge through **investigation** of a domain of work/play to create **ideas and prototypes**.
- **Prototypes** are used for **evaluation**, and to further stimulate investigation, and **idea and prototype generation**.
- These **prototypes** and **evaluations** are used to aid in **production**.

Why a process?

Why a process?

- Get started in a proven track

Why a process?

- Get started in a proven track
- Prevents “designer’s block”

Why a process?

- Get started in a proven track
- Prevents “designer’s block”
- Directs us toward final product

Why a process?

- Get started in a proven track
- Prevents “designer’s block”
- Directs us toward final product
- Helps us stay on schedule and on cost

Why a process?

- Get started in a proven track
- Prevents “designer’s block”
- Directs us toward final product
- Helps us stay on schedule and on cost
- Helps us to communicate with others

Why a process?

- Get started in a proven track
- Prevents “designer’s block”
- Directs us toward final product
- Helps us stay on schedule and on cost
- Helps us to communicate with others
- More reliable than intuition

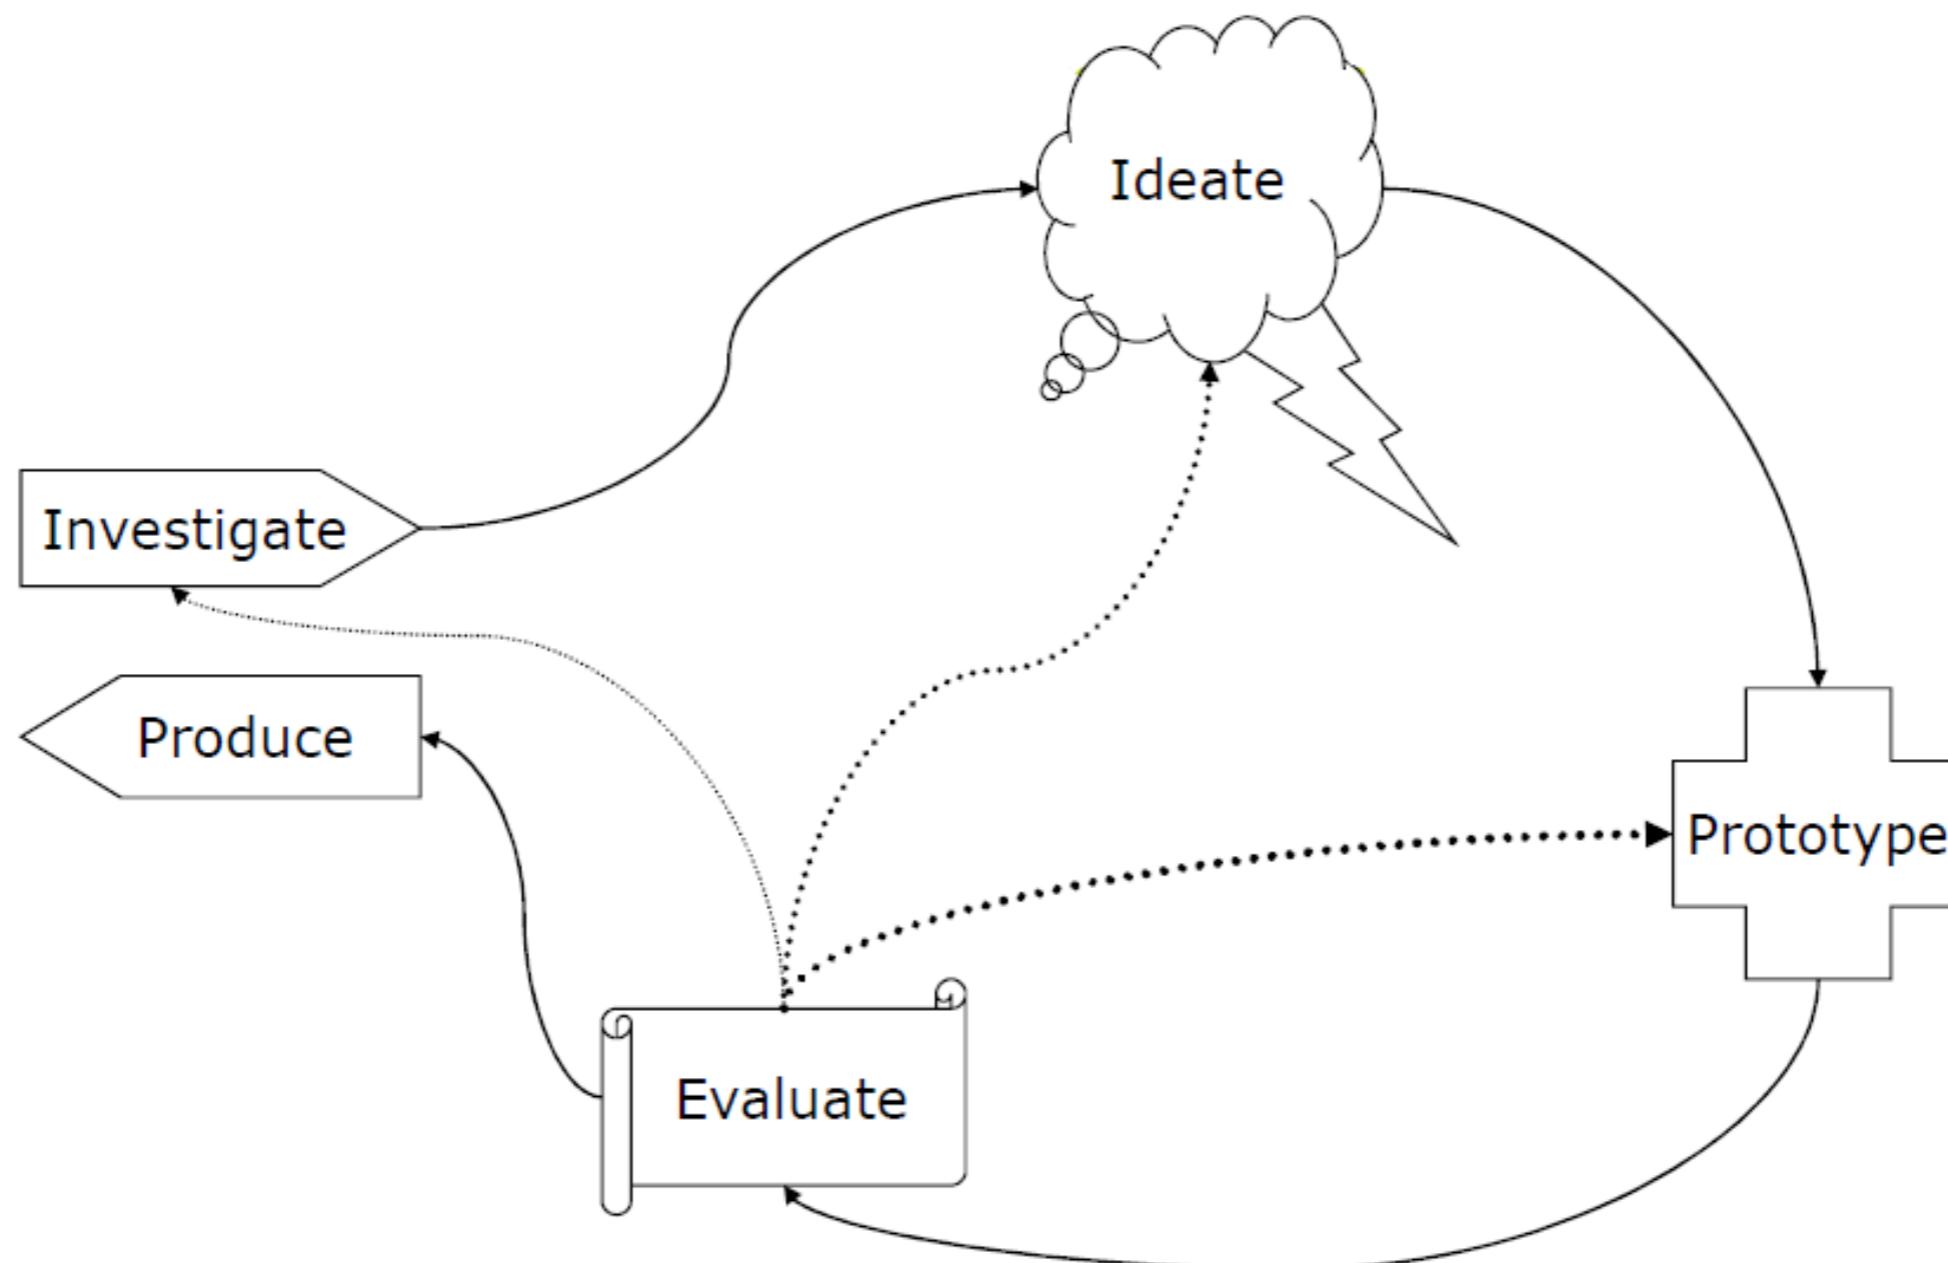

Why a process?

- Get started in a proven track
- Prevents “designer’s block”
- Directs us toward final product
- Helps us stay on schedule and on cost
- Helps us to communicate with others
- More reliable than intuition
- Forces us to **iterate**

Why a process?

- Get started in a proven track
- Prevents “designer’s block”
- Directs us toward final product
- Helps us stay on schedule and on cost
- Helps us to communicate with others
- More reliable than intuition
- Forces us to **iterate**
- Helps to **keep the users first**
